## 13 Copyright Licenses – HL7®

14 HL7 licenses its standards and select IP free of charge. If you did not acquire a free license from HL7 for this  
15 document, you are not authorized to access or make any use of it. To obtain a free license, please visit  
16 <http://www.HL7.org/implement/standards/index.cfm>.

17 If you are the individual that obtained the license for this HL7 Standard, specification or other freely licensed work (in  
18 each and every instance "Specified Material"), the following describes the permitted uses of the Material.

19 **A. HL7 INDIVIDUAL, STUDENT AND HEALTH PROFESSIONAL MEMBERS**, who register and agree to the terms of  
20 HL7's license, are authorized, without additional charge, to read, and to use Specified Material to develop and sell  
21 products and services that implement, but do not directly incorporate, the Specified Material in whole or in part without  
22 paying license fees to HL7.

23 **INDIVIDUAL, STUDENT AND HEALTH PROFESSIONAL MEMBERS** wishing to incorporate additional items of  
24 Special Material in whole or part, into products and services, or to enjoy additional authorizations granted to HL7  
25 ORGANIZATIONAL MEMBERS as noted below, must become ORGANIZATIONAL MEMBERS of HL7.

26 **B. HL7 ORGANIZATION MEMBERS**, who register and agree to the terms of HL7's License, are authorized, without  
27 additional charge, on a perpetual (except as provided for in the full license terms governing the Material), non-  
28 exclusive and worldwide basis, the right to (a) download, copy (for internal purposes only) and share this Material  
29 with your employees and consultants for study purposes, and (b) utilize the Material for the purpose of developing,  
30 making, having made, using, marketing, importing, offering to sell or license, and selling or licensing, and to  
31 otherwise distribute, Compliant Products, in all cases subject to the conditions set forth in this Agreement and any  
32 relevant patent and other intellectual property rights of third parties (which may include members of HL7). No other  
33 license, sublicense, or other rights of any kind are granted under this Agreement.

34 **C. NON-MEMBERS**, who register and agree to the terms of HL7's IP policy for Specified Material, are authorized,  
35 without additional charge, to read and use the Specified Material for evaluating whether to implement, or in  
36 implementing, the Specified Material, and to use Specified Material to develop and sell products and services that  
37 implement, but do not directly incorporate, the Specified Material in whole or in part.

38 **NON-MEMBERS** wishing to incorporate additional items of Specified Material in whole or part, into products and  
39 services, or to enjoy the additional authorizations granted to HL7 ORGANIZATIONAL MEMBERS, as noted above,  
40 must become ORGANIZATIONAL MEMBERS of HL7.

41 Please see <http://www.HL7.org/legal/ippolicy.cfm> for the full license terms governing the Material.

# 1 Introduction & Scope

## 1.1 Purpose

The Dialysis Machine Implementation Guide is a messaging specification intended to standardize the electronic reporting of patient, clinical, and machine data to electronic health record (EHR) systems and/or electronic medical record (EMR) systems found in most care settings today. The goal of this specification is to provide an applicable set of data definitions and structures that can be adopted as a worldwide industry standard, thereby obviating the need for proprietary solutions for dialysis healthcare interoperability.

## 1.2 Audience

The standards defined in this guide are intended for use by data exchange systems found in Renal Care groups listed below:

- Renal Care Providers
- Dialysis System Manufacturers
- Other groups or agencies that employ a dialysis machine to EHR/EMR interface

## 1.3 Scope

This specification focuses exclusively on the electronic reporting of device treatment data from a dialysis machine to an EHR/EMR for hemodialysis therapies based on HL7 v2.6 messaging. Specifically, the patient info, treatment system readings, thresholds, and alarms which may be generated during machine usage can be communicated.

This specification does NOT cover peritoneal dialysis or communication from an EHR/EMR to the dialysis machine.

## 1.4 Assumptions

This document assumes that users have a need to exchange treatment data between dialysis devices and EHRs. It also assumes that the user is familiar with the HL7 v2.6 standard as well as the IHE PCD specifications.

## 1.5 Conventions

This specification is primarily based on the Integrating the Healthcare Enterprise (IHE), Patient Care Device (PCD) technical framework, which is based on a profile as defined in the Health Level 7 (HL7)'s v2.6 Normative Standard. A message profile is an unambiguous specification of an HL7 message type intended for a particular use case, as defined in Section 2.B of the HL7 v2.6 Standard. Additionally, the message structures and terminology are based on the ISO/IEEE 11073 Standard for Medical Device Communication.

An HL7 message profile defines both the *dynamic* aspects of information interchange (i.e., the systems that participate in such interchanges and the real-world events that trigger messaging) as well as the *static* aspects of messaging (i.e., the structure and contents of the electronic messages that are exchanged).

Optionality (aka. Usage) is defined as one of the values in the following table.

Usage Values

Value	Description
B	Left for backwards compatibility.
C	Conditional
CE	Conditional but maybe empty.
O	Optional
R	Required
RE	Required but maybe Empty. The field or data type component description must stipulate when the field or data type component may be empty.

## Usage Values

Value	Description
W	Withdrawn
X	Not used

The IHE Patient Care Device Technical Framework uses an information model and a nomenclature from the IEEE 11073. The information model is defined in ISO/IEEE 11073- 10201 Health Informatics – Point-of-care medical device communication – Part 10201: Domain Information Model. The nomenclature is defined in ISO/IEEE 11073-10101 Health Informatics – Point -of-care medical device communication – Part 10101: Nomenclature. Familiarity with these standards is necessary for implementers of the Device Observation Reporter and Device Observation Consumer Actors.

HL7 V2.6 Chapter 7 Observation Reporting defines the general HL7 syntax and coding requirements related to observation reporting, used for PCD data communications in the PCD TF. Familiarity with HL7 Chapter 7 is necessary for implementers of the PCD TF transactions.

This Technical Framework specifies conventions that are used to represent the information model hierarchy for medical devices embodied in the IEEE 11073 Domain Information Model within the syntactic and semantic conventions of HL7 v. 2.6

The values reported in the observations should be the value as shown to the user on the device. The purpose of this is to create a run sheet that could be referenced back to events as seen by the users. As such, sampling rates, average methods, or other mathematical manipulations of signals is beyond the scope of this standard. Likewise, logic for initiating or terminating events is not defined in this standard. Since these items may vary between manufacturers or machines, if this information is relevant to understanding the reported data, it should be disclosed in the manufacturer's technical documentation.

216 **CARD:** Cardinality

## 218 2 Patient Identification

219 Patient Identification is perhaps the most essential infrastructural component of any interoperability and  
220 communication process, particularly when PCD data is exported to the enterprise. It is the key element in medical  
221 device, communication, data analysis, reporting and record keeping. Automation of the entry of patient identification  
222 to patient care device has the potential for improving throughput, reducing errors, increasing safety and device and  
223 drug effectiveness, and efficiency. It is strongly recommended that implementations use IHE Patient Demographics  
224 Query (PDQ) Integration Profile compliant transactions for acquisition of Patient Identification credentials. These  
225 transactions include: ITI-21, ITI-30 and ITI-31. Other mechanisms such as bar code or RFID are also valid alternatives or  
226 complements.

227 If the Dialysis Machine has no way of obtaining a Patient Identifier, it will report a string value that is  
228 Model/Serial\_Number.

## 229 3 Time Synchronization

230 The data reported by a dialysis machine must be reconcilable with data from other parts of the health care enterprise.  
231 In order for this to occur, time must be synchronized between the machines involved in the transactions. To this end,  
232 dialysis machines compliant with this standard will use the IHE Consistent Time (CT) Protocol. The Consistent Time  
233 Profile specifies the use of the Network Time Protocol (NTP) defined in RFC1305.

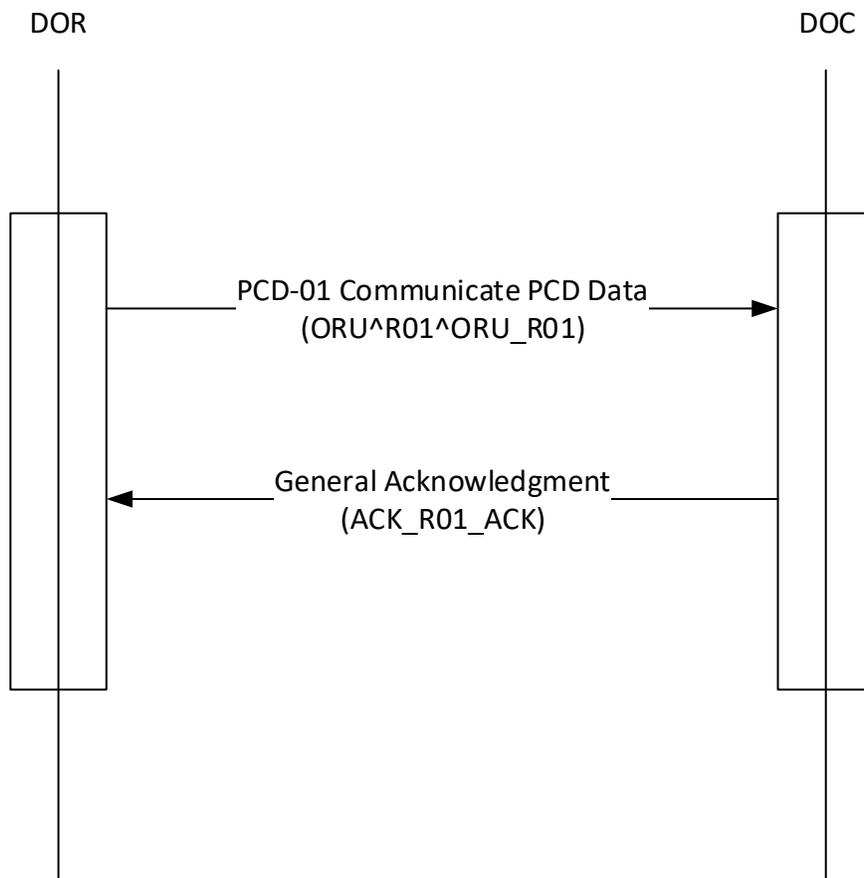

## 234 4 Reporting Treatment Information

### 235 4.1 Overview

236 The sending of Treatment Information to the EMR System is accomplished using the Patient Care Device (PCD)  
237 domain in the Device Enterprise Communication (DEC) IHE profile. In doing so, the Dialysis Machine acts as the  
238 Device Observation Report (DOR) and the EMR is the Device Observation Consumer (DOC).

239

Figure 1 - Communicate PCD Data Interaction Diagram

240

241

242

243

In general, the Dialysis Machine sends periodic reports at an interval of between several times per minute (high acuity) and a maximum interval of 24 hours (chronic, home health). The minimum and maximum intervals are configured at implementation. The Dialysis Machine may also send aperiodic reports for "event type" information.

244

245

This specification includes different observation types based on differing real-world triggers. The elements for each observation are indicated in Section 7 - Dialysis Data Elements. The types are:

246

247

248

249

- Status – Sent initially, terminally, and when the treatment status changes
- Parameter – Sent initially and when any parameter changes
- Identifier – Sent with all messages
- Blood Pressure – Sent when communicating a measurement

250

251

252

253

254

A Status Report will contain all mandatory elements, the applicable conditional elements, and the optional elements supported by the dialysis machine. In addition, the dialysis machine may report other data objects not identified by this standard. This allows the device manufacturer to report information that is not common across all dialysis machines and is therefore not part of this standard.

255

256

The nature of the PCD-01 message is that it contains a snapshot in time of the treatment. The capturing of an entire treatment into a "run sheet" can be accomplished using the HL7 Batch Protocol described in Appendix A.

260

261

#### 4.2.2 Observation Results Structure

262

263

264

Observation results are grouped in the hierarchy of Medical Device System (MDS), Virtual Medical Device (VMD), Channel, and Metric/Observation. When VMD is not present in the dialysis machine, the VMD information is not reported. For example, when a dialysis machine does not have a blood pressure cuff, the

MDC\_DEV\_PRESS\_BLD\_NONINV\_VMD is not reported. If a Channel does not contain any Metrics/Observations due to dialysis machine therapy or operating mode, the channel is not reported. For example, when a dialysis machine is performing a Hemofiltration Therapy, the MDC\_DEV\_HDIALY\_FLUID\_CHAN will not be reported. Because of this dynamic nature, sub-observation IDs will change from treatment to treatment and should not be used for parsing of messages from the dialysis machine. If the Mode of Operation (MDC\_HDIALY\_MACH\_MORE\_OF\_OPERATION) is Service or Idle then only the Machine Channel (MDC\_DEV\_HDIALY\_MACH\_CONFIG\_CHAN) is present.

### 4.2.3 Event Status

This standard allows event information to be transmitted in one of two methods.

- True/False
- Start/Continue/End

When True/False is used, the dialysis machine communicates the state of each event in every PCD-01 message. The event is either active (i.e. True) or Inactive (i.e. False). Since the dialysis machine is sending PCD-01 messages every time status changes instead of just periodically, the time associated with an event state transition is the time of the observation as specified by time point OBX-14 or the default time point specified by OBR-7.

Example, Blood Leak not detected

```
OBX|20|ST|198244^MDC_EVT_HDIALY_BLOOD_LEAK^MDC|1.1.4.15|F|||||F
```

Example, Blood Leak detected

```
OBX|20|ST|198244^MDC_EVT_HDIALY_BLOOD_LEAK^MDC|1.1.4.15|T|||||F
```

When Start/Continue/End is used the dialysis machine communicates the starting and ending time of the event. The time associated with these events is expressly indicated in the OBX-14 portion of the event. In PCD-01 messages where the event did not start or end but is still active the dialysis machine reports continue. In the case where a dialysis machine does not know the starting time of an event, it will transmit continue as the first state for the event.

Example, Blood Leak detected

```
OBX|20|ST|198244^MDC_EVT_HDIALY_BLOOD_LEAK^MDC|1.1.4.15|start|||||||20191003092005+0000
```

Example, Blood Leak ongoing

```
OBX|20|ST|198244^MDC_EVT_HDIALY_BLOOD_LEAK^MDC|1.1.4.15|continue|||||||20191003092015+0000
```

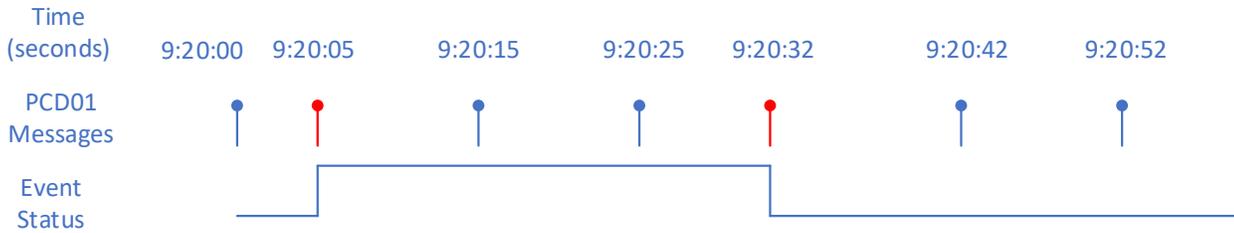

Example, Blood Leak done

```
OBX|20|ST|198244^MDC_EVT_HDIALY_BLOOD_LEAK^MDC|1.1.4.15|end|||||||20191003092032+0000
```

The following figure shows how the dialysis machine would report an event for each of the two methods.

302

**Figure 2 – Event Status in PCD-01 Messages**

Using Start/Continue/End

- \* PCD01 Msg at Time 9:20:00 would not mention the event.
- \* PCD01 Msg at Time 9:20:05 would contain the Start with a Time of 9:20:05.
- \* PCD01 Msg at Time 9:20:15 and 9:20:25 would contain the Continue.
- \* PCD01 Msg at Time 9:20:32 would contain the End with a timestamp of 9:20:32.
- \* PCD01 msg at Time 9:20:42 and beyond would not mention the event

Using True/False without Timestamp in OBX

- \* PCD01 Msg at Time 9:20:00 would have an event value of False.
- \* PCD01 Msg at Time 9:20:05, 9:20:15, & 9:20:25 would have an event value of True.
- \* PCD01 Msg at Time 9:20:32 and beyond would have an event value of false.

Note, this standard reports Boolean event values in the PCD-01 transaction. This is done so that a complete record of the machine state is captured in the PCD-01. The state of the events is not considered clinically actionable. Clinically actionable alerts and events are communicated in the PCD-04 transaction.

### 4.3 EMR Response

The EMR responds with a simple Acknowledgement Message (ACK\_R01\_ACK). Although the response to a missing or rejected response is machine specific, this standard recommends the following actions:

- 639 1) If the EMR does not respond then the dialysis machine should retry the message. If no response is received  
640 for the retry, the dialysis machine should generate an alert locally.
- 641 2) If the EMR responds but rejects the PCD-01 message, the dialysis machine should generate an alert locally.

## 653 5 Reporting Alarm Information

### 654 5.1 Overview

655 The sending of Alarm Information to the EMR System is accomplished using the PCD-04 Transaction of the Patient  
656 Care Device (PCD) domain in the Device Enterprise Communication (DEC) IHE profile. In doing so, the Dialysis  
657 Machine acts as the Alert Reporter (AR) and the EMR is the Alert Manager (AM) and/or the Alert Consumer (ACON).  
658  
659  
660  
661

662

**Figure 3 - AR sends Report Alert to AM and/or ACON as an HL7 ORU message.**

663

664

665 The Dialysis Machine will report the alarm when the alarm state changes, when the alarm activity state changes,  
 666 and periodically while it is active. The period of the "keep-alive" PCD-04 messages should be disclosed in the  
 667 manufacturer's documents. It is recommended that this be between 10 and 30 seconds. The dialysis machine will  
 668 send the appropriate parameters and measurements with each alarm. For example, when an Arterial Pressure High  
 669 Alarm is reported, the message will contain the Arterial pressure Measurement and Arterial Pressure Upper Limit.

670 The ORU^R40 message represents a unitary alert, which is to be acknowledged as a whole by an ORA message.  
 671 Multiple alerts requiring separate acknowledgement will be sent as individual messages.

672 The ORDER\_OBSERVATION Segment Group which has OBR-49 value A (Alert provider when abnormal) conveys the  
 673 alert observation(s). One or more OBX segments in this Segment Group will typically have OBX-8 Interpretation  
 674 Codes value of LL, HH, or AA. At least one OBR segment shall have OBR-49 value A. Other ORDER\_OBSERVATION  
 675 Segment Groups within the message shall be considered supporting information for the alert observation(s).

## 676 5.2 Device Request

677 The PCD-04 Report Alert message is used to communicate ACM data from an Alert Reporter (AR) to Alert  
 678 Manager (AM) and/or Alert Consumer (ACON). In addition, the Dialysis Machine sends a PCD-04 Message to  
 679 the Device Observation Consumer (DOC) so that the information can be logged with the PCD-01 Message.

680 Common HL7 segments are defined in HL7 Data Elements. There are sections discussing considerations specific  
 681 to PCD-04 where applicable.

682 While there can be multiple OBR segments per PCD-04 transaction (in support of inclusion of alert common  
 683 containment and evidentiary data) there is at most one alert per PCD-04 transaction.

## 5.2.1 Message Structure

Message Type - ORU^R40^ORU\_R40

Segment	Meaning	Use	Card
MSH	Message Header	R	[1..1]
[(SFT)]	Software Segment	X	[0..0]
{	--- ALERT_begin

[[NTE]]	Notes and Comments	X	[0..0]
}}	--- ALERT OBSERVATION end		
}	--- ALERT_IDENTIFICATION end		
}	--- ALERT end		

A single Report Alert [PCD-04] transaction contains at most one alert for a given patient. The PCD-04 message contains a single OBR segment that contains five OBX segments.

- OBX 1 identifies the type of alarm
- OBX 2 identifies the event source. For numeric values this include the object value and limits. This is the Source Column in Table 2.
- OBX 3 identifies the event phase
- OBX 4 identifies the alarm state
- OBX 5 identifies the alarm activity state

The first OBX (ID=1) identifies the type of alert.

This field defines the data type of OBX-5, Observation Value. For this segment the value will always be "CWE".

**OBX-3 Observation Identifier**

This field will be one of the following.

Field Value	Usage
196670^MDC_EVT_LO^MDC	This value is used when the alarm is generated because a measure value is below a numeric limit.
196648^MDC_EVT_HI^MDC	This value is used when the alarm is generated because a measure value is above a numeric limit.
196616^MDC_EVT_ALARM^MDC	This value is used when the alarm is not generated due to a numeric value.

**OBX-4 Observation Sub-ID**

This value will always be "1.0.0.0.1".

**OBX-5 Observation Value**

This field identifies the alarm being generate. For numeric values, this field is the value in the Source Column in Table 2. For non-numeric alarms, this field is the Event Identifier Column in Table 2.

For example, "198240^MDC\_EVT\_HDIALY\_ANTICOAG\_SYRINGE\_SIZE^MDC"

"198242^MDC\_EVT\_HDIALY\_BLD\_PUMP\_STOP^MDC"

**OBX-8 Interpretation Codes**

This field is used to provide the Alarm Priority and Alarm Type, and optionally the Abnormality Type.

Examples,

High Priority, Technical, Upper Limit Alarm H~ST~PH

Non-Numeric High Priority, Technical Alarm ST~PH

**OBX-11 Observation Result Status**

For this segment the value will always be "F".

The second OBX (ID=2) identifies the parameter and the reference range.

**HL7 Attribute Table - OBX Segment**

**OBX-1 Set ID**

For this segment the value will always be 2.

**OBX-2 Value Type**

This field defines the data type of OBX-5, Observation Value. For numeric alarms, this value will be "NM". For non-numeric alarms, this value will be "CWE".

**OBX-3 Observation Identifier**

For numeric alarms, this field identifies the object being monitored. This object is identified in the Source Column in Table 2.

For non-numeric alarms, this field will always be "68480^MDC\_ATTR\_ALERT\_SOURCE^MDC".

**OBX-4 Observation Sub-ID**

For numeric alarms, this field identifies the object being measured. This value is the Observation Sub ID of the object identified in the Source Column in Table 2.

For non-numeric alarms, this field identifies the VMD of the device generating the alarm. This value is the Observation Sub-ID of the object identified in the Source Column in Table 2.

In both cases, the observation sub-ID has ".2" appended to signify facet 2.

For example, the Therapy Outcomes VMD would be reported as "1.1.8.2".

**OBX-5 Observation Value**

For numeric alarms, this field contains the value of the object that resulted in the alarm.

For non-numeric alarms, this field contains the identifier of the VMD generating the alarm. This is identified in the Source Column in Table 2.

Example, "70967^MDC\_DEV\_HDIALY\_THERAPY\_OUTCOMES\_CHAN^MDC".

**OBX-6 Observation Units**

For numeric alarms, this field contains the units of measure for the object.

For non-numeric alarms, this field is blank.

**OBX-7 Reference Range**

This field contains the alarm limits for numeric alarms. For non-numeric alarms this field is empty. Ranges can be specified in one of three ways.

	Format	Example
Upper Limit Only	> Upper	> 400
Lower Limit Only	< Lower	< -200
Upper and Lower Limit	Lower – Upper	20 - 400

**OBX-11 Observation Result Status**

For this segment the value will always be "F".

The third OBX (ID=3) identifies the event phase.

**OBX-1 Set ID**

This field contains the sequence number. For this segment it will always be 3.

**OBX-2 Value Type**

This field defines the data type of OBX-5, Observation Value. For this segment the value will always be "ST".

**OBX-3 Observation Identifier**

This field will always be "68481^MDC\_ATTR\_EVENT\_PHASE^MDC".

**OBX-4 Observation Sub-ID**

This value will always be "1.0.0.0.3".

**OBX-5 Observation Value**

This value will always be one of the following.

- start start of an interval event/alert – an end is expected
- continue continuation of an ongoing interval event/alert
- end end of an interval event/alert

**OBX-11 Observation Result Status**

For this segment the value will always be "F".

The third OBX (ID=4) identifies the alarm state.

This value will always be "1.0.0.0.4".

**OBX-5 Observation Value**

This value will one of the following:

- off
- inactive
- active
- latched

**OBX-11 Observation Result Status**

For this segment the value will always be "F".

The third OBX (ID=5) identifies the alarm activity state.

**OBX-3 Observation Identifier**

This field will always be "68483^MDC\_ATTR\_ALARM\_INACTIVATION\_STATE^MDC".

**OBX-4 Observation Sub-ID**

This value will always be "1.0.0.0.5".

**OBX-5 Observation Value**

This value will one of the following:

- enabled
- audio-paused
- audio-off
- alarm-paused
- alarm-off
- alert-acknowledged (IEC 60601-1-8 Amendment 1; CP126)

**OBX-11 Observation Result Status**

## 6 HL7 Data Elements

The information contained in this section is a subset of the full HL7 Specification. Only segments used by this standard are shown. Restrictions that are specific to this specification are identified for each segment.

### 6.1 Tables

The values contained in the tables in this section may be a subset of the values supported by the HL7 specification. Only values supported or used by Dialysis Machines are shown.

**HL7 Table 0008 - Acknowledgment Code**

Value	Description
AA	Original mode: Application Accept - Enhanced mode: Application acknowledgment: Accept
AE	Original mode: Application Error - Enhanced mode: Application acknowledgment: Error
AR	Original mode: Application Reject - Enhanced mode: Application acknowledgment: Reject
CA	Enhanced mode: Accept acknowledgment: Commit Accept
CE	Enhanced mode: Accept acknowledgment: Commit Error
CR	Enhanced mode: Accept acknowledgment: Commit Reject

**HL7 Table 0038 - Order status**

Value	Description
A	Some, but not all, results available
CA	Order was canceled
CM	Order is completed
DC	Order was discontinued
ER	Error, order not found
HD	Order is on hold
IP	In process, unspecified
RP	Order has been replaced
SC	In process, scheduled

**HL7 Table 0085 - Observation result status codes interpretation**

Value	Description
F	Final results; Can only be changed with a corrected result.

**HL7 Table 0123 - Result status for OBR segment**

Value	Description
O	Order received; specimen not yet received
I	No results available; specimen received, procedure incomplete
S	No results available; procedure scheduled, but not done

Value	Description
A	Some, but not all, results available
P	Preliminary: A verified early result is available, final results not yet obtained
C	Correction to results
R	Results stored; not yet verified
F	Final results; results stored and verified. Can only be changed with a corrected result.
X	No results available; Order canceled.
Y	No order on record for this test. (Used only on queries)
Z	No record of this patient. (Used only on queries)

UCUM	Unified Code for Units of Measure (UCUM)

904

905

**HL7 table 0357 – Message Error Condition Codes**

Value	Description	Comment
0	Message accepted	Success. Optional, as the AA conveys success. Used for systems that shall always return a status code.
100	Segment sequence error	Error: The message segments were not in the proper order, or required segments are missing.
101	Required field missing	Error: A required field is missing from a segment

Value	Description	Comment
102	Data type error	Error: The field contained data of the wrong data type, e.g. an NM field contained "FOO".
103	Table value not found	Error: A field of data type ID or IS was compared against the corresponding table, and no match was found.
200	Unsupported message type	Rejection: The Message Type is not supported.
201	Unsupported event code	Rejection: The Event Code is not supported.
202	Unsupported processing id	Rejection: The Processing ID is not supported.
203	Unsupported version id	Rejection: The Version ID is not supported.
204	Unknown key identifier	Rejection: The ID of the patient, order, etc., was not found. Used for transactions <i>other than</i> additions, e.g. transfer of a non-existent patient.
205	Duplicate key identifier	Rejection: The ID of the patient, order, etc., already exists. Used in response to addition
206	Application record locked	Rejection: The transaction could not be performed at the application storage level, e.g., database locked.
207	Application internal error	Rejection: A catchall for internal errors not explicitly covered by other codes.

HL7 table 0516 – Error Severity

Value	Description	Comment
W	Warning	Transaction successful, but there may issues
I	Information	Transaction was successful but includes information e.g., inform patient
E	Error	Transaction was unsuccessful

## 6.2 Segments

### 6.2.1 MSA – Message Acknowledgement Segment

The MSA segment contains INFORMATION sent while acknowledging another message. This message is sent from the EMR System to the Dialysis Machine. Although other fields may be present, the Dialysis Machine processes MSA-1 Acknowledgement Code and MSA-2 Message Control ID.

HL7 Attribute Table - MSA Segment

SEQ	DT	OPT	TBL#	ELEMENT NAME
1	ID	R	0008	Acknowledgment Code
2	ST	R		Message Control ID
3		W		Text Message
4	NM	O		Expected Sequence Number
5		W		Delayed Acknowledgment Type
6		W		Error Condition
7	NM	O		Message Waiting Number
8	ID	O	0520	Message Waiting Priority

**MSA-1 Acknowledgment Code (ID)**

HL7 Definition: This field contains an acknowledgment code, see message processing rules. Refer to HL7 Table 0008 - Acknowledgment Code for valid values.

In this table, the value "CA" corresponds to "Enhanced mode: Accept acknowledgment: Commit Accept." This value means that the receiving system has committed the message to safe storage in a manner that releases the sending system from the need to resend the message. "CR" means that a message was rejected for a message uniquely identified by the information in MSH-9, MSH-12, MSH-11, MSH-21. "CE" is a message processing error or failure condition.

**This Specification:** The Dialysis Machine accepts both original and enhanced mode responses. The response of the Dialysis Machine to an Error or Rejected message is device and manufacturer specific and is not covered by this guide.

**MSA-2 Message Control ID (ST)**

HL7 Definition: This field contains the message control ID of the message sent by the sending system. It allows the sending system to associate this response with the message for which it is intended.

**This Specification:** Note that the combination of the values in *MSA-2 Message Control ID* and *MSH-6 Receiving Facility* should be unique to the recipient of the acknowledgement message (i.e., the Order Filler).

**Note on Element Length:** The element length for MSA-2 has been extended to 50 characters from the HL7-prescribed length of 20 characters. This element has been extended to accommodate the extended element length of MSH-10 Message Control ID in the ORU message types.

## 6.2.2 MSH – Message Header Segment

The MSH segment defines the intent, source, destination, and some specifics of the syntax of a message.

HL7 Attribute Table - MSH Segment

SEQ	DT	OPT	TBL#	ELEMENT NAME

939

940

**MSH-1 Field separator (ST)**

941

942

943

**HL7 Definition:** This field contains the separator between the segment ID and the first real field. As such it serves as the separator and defines the character to be used as a separator for the rest of the message. Recommended value is | (ASCII 124).

944

**This Specification:** This value will be | (ASCII 124).

945

**MSH-2 Encoding characters (ST)**

946

947

948

**HL7 Definition:** This field contains four characters in the following order: the component separator, repetition separator, escape character, and subcomponent separator. Recommended values are ^~\& (ASCII 94, 126, 92, and 38, respectively).

949

**This Specification:** This value will be recommended values are ^~\& (ASCII 94, 126, 92, and 38, respectively).

950

**MSH-3 Sending Application (HD)**

951

952

953

**HL7 Definition:** This field uniquely identifies the sending application among all other applications within the network enterprise. The network enterprise consists of all those applications that participate in the exchange of HL7 messages within the enterprise.

954

955

**This Specification:** This value will name of the dialysis machine and the Extended Unique Identified (EUI-64). For example,

956

```
ACME_Dialysis_Machine^080019FFFE3ED02D^EUI-64
```

957

958

The EUI-64 is created from the MAC Adress of the interface sending the messages. If the MAC address of the interface is 12-34-56-78-AB-CD then the EUI-64 is 123456FFFE78ABCD.

959

**MSH-7 Date/time of message (TS)**

960

961

**HL7 Definition:** This field contains the date/time that the sending system created the message. If the time zone is specified, it will be used throughout the message as the default time zone.

962

**MSH-9 Message type (MSG)**

963

964

**HL7 Definition:** This element contains the message type, trigger event, and the message structure ID for the message.

965

```
CM Components: <message type (ID)> ^ <trigger event (ID)> ^ <message structure (ID)>
```

966

967

The allowed components of this element are listed in several tables maintained by HL7 (*HL7 Table 0076 - Message type*, *HL7 Table 0003 - Event type*, and *HL7 Table 0354 - Message structure*).

968

**This Specification:** In the MT-ACK-1 message type, this element shall be hard coded to ACK^R01^ACK

969

**MSH-10 Message control ID (ST)**

970

**HL7 Definition:** This element contains a number or other identifier that uniquely identifies the message.

971

972

**This Specification:** The sending system shall assign an identifier for the message that is unique within the namespace of the sending facility and/or application.

Note that the value of this element is *not* a reference to the message that is being acknowledged. The Message control ID of the acknowledged message appears in MSA-2 Message Control ID.

**Note on Element Length:** The element length for MSH-10 has been extended to 50 characters from the HL7-prescribed length of 20 characters. This extension allows sending systems to use globally unique identifiers (such as GUIDs) for Message IDs, an increasingly common practice.

#### MSH-11 Processing ID (PT)

**HL7 Definition:** This field is used to decide whether to process the message as defined in HL7 Application (level 7) Processing rules.

**This Specification:** This value will be "P".

#### MSH-12 Version ID (VID)

**HL7 Definition:** This field identifies the version.

**This Specification:** This value will be "2.6".

#### MSH-21 Message Profile Identifier (EI)

**HL7 Definition:** Sites may use this element to assert adherence to a Conformance Statement published by HL7 or by a site. Conformance Statements contain detailed explanations of grammar, syntax, and usage for a particular message or set of messages. This element is treated like all EI data type information, if the underscores or dashes are used as encoding characters in an interface, those characters shall be escaped to be sent in the above element.

**This Specification:** In the MT-ACK-1 message type, MSH-21 Conformance statement ID should be: DIALY\_MT-ACK-1\_R1

### 6.2.3 OBR– Observation Request Segment

The ORU message may include discrete OBX segments for individual observations reported. An OBR Segment will be used for each set of such OBX segments to establish the equipment context for the observations. All observation dates and times reported here should match OBX segments that report the same information.

HL7 Attribute Table - OBR Segment

999

000

**OBR-3 Filler Order Number**

001

**HL7 Definition:** This field is the order number associated with the filling application. This is a permanent identifier for an order and its associated observations.

002

003

**This specification:** This value is used to convey a unique identifier for the therapy being performed. It is a concatenation of the Dialysis Machine EUI-64 (see MSH-3) and a timestamp. The format is

004

005

Therapy\_ID^Machine\_Name^Extended\_Unique\_Identifier^EUI-64

006

The Machine Name and Extended Unique identified are the same as conveyed in the MSH-3. The Therapy\_ID is the Extended Unique Identifier concatenated with the timestamp using the following format.

007

008

XXXXXXXXXXXXXXXXXXXXYYYYMMDDhhmmss

009 Where XXXXXXXXXXXXXXXX is the Extended Unique Identifier

010 YYYY is the year

011 MM is the month with zero padding.

012 DD is the day of the month with zero padding.

013 hh is the hours (0-23) with zero padding.

014 mm is the minutes with zero padding

015 ss is the seconds with zero padding

016 Example of a Therapy\_ID, 080019FFFE3ED02D2011060204584

017 Example of the OBR-3 Field,

018 080019FFFE3ED02D2011060204584^ACME\_Dialysis\_Machine^080019FFFE3ED02D^EUI-64

#### 020 **OBR-4 Universal Service ID**

021 **HL7 Definition:** This field contains the identifier code for the requested observation/test/battery.

022 **This specification:** Identifier and Text can identify unique OBR segments that partition observations. The  
023 values for this field will be taken from the 11073\_10103 MDC\_IDC\_SESS\_TYPE enumerator  
024 MDC\_IDC\_ENUM\_SESS\_TYPE.

#### 026 **OBR-7 Observation Date/Time**

027 **HL7 Definition:** This field is the clinically relevant date/time of the observation. In the case of observations  
028 taken directly from a subject, it is the actual date and time the observation was obtained. In the case of a  
029 specimen associated study, this field shall represent the date and time the specimen was collected or  
030 obtained. (This is a results-only field except when the placer or a third party has already drawn the specimen.)  
031 This field is conditionally required. When the OBR is transmitted as part of a report message, the field **must** be  
032 filled in. If it is transmitted as part of a request **and** a sample has been sent along as part of the request, this  
033 field must be filled in because this specimen time is the physiologically relevant date/time of the observation.

034 **This Specification:** This value will be the same as the message time, MSH-7.

#### 035 **OBR-25 Result Status**

036 **HL7 Definition:** This field contains the status of results for this order. This conditional field is required  
037 whenever the OBR is contained in a report message. See HL7 Table 0085.

038 **This Specification:** This value will always be Final ("F").

### 040 6.2.4 OBX– Observation Results Segment

041 Discrete OBX segments for individual observations will be encoded into separate OBX segments as individual  
042 observations or measurements. These OBX segments will be preceded by an appropriate OBR segment to set the  
043 context for observations dealing with the dialysis device, characteristics, or treatment measurements.

045

**OBX-1 Set ID**

046

HL7 Specification: This field contains the sequence number.

047

**OBX-2 Value Type**

048

HL7 Specification: This field defines the data type of OBX-5, Observation Value.

049

This specification: Only value identified in the table below will be used. The value is based upon the value type as identified in the Dialysis Data Elements Table.

050

053

**OBX-3 Observation Identifier**

054

HL7 Specification: This field contains a unique identifier for the observation.

055

This specification: The format is that of the Coded Element (CWE). Example: "158606^MDC\_HDIALY\_DIALYSATE\_FLOW\_MODE^MDC".

056

057

**OBX-4 Observation Sub-ID**

HL7 Specification: This field is used to distinguish between multiple OBX segments with the same observation ID organized under one OBR.

This specification: This value is expressed in a dotted notation consisting of 4 parts, MDS, VMD, CHAN, and Parameter.

**OBX-5 Observation Value**

HL7 Specification: This field contains the value observed by the observation producer.

This specification: This is the actual value is expressed a string value.

**OBX-6 Unit**

HL7 Specification: This field contains the units of measurement for the value.

This specification: Will be coded with the MDC\_IDC Nomenclature (based on UCUM) Unit for associated observation. Example, "ml/min^milliliter per minute^UCUM"

**OBX-7 Reference Range**

HL7 Specification: Reference range for the value.

- a) lower limit-upper limit (when both lower and upper limits are defined, e.g., for Venous Pressure, 20-400)
- b) > lower limit (if no upper limit, e.g., >10)
- c) < upper limit (if no lower limit, e.g., <15)

This specification: For Dialysis Machines' this field is used to provide the alarm limits for a numeric parameter.

**OBX-8 Interpretation Codes**

HL7 Specification: One or more codes specifying a categorical assessment of the observation value (OBX-5), such as "Normal", "Abnormal", "Positive", "Negative", "Resistant", "Susceptible", etc.

This specification: This field is used to provide zero or more codes separated by the tilde ("~"). A dialysis machine provides two mandatory codes, Alarm priority and Alarm Type, and one optional code, Abnormality Type.

The alarm priority is dialysis machine specific and may vary by manufacturer.

Alarm Priority	Code
High	PH
Medium	PM
Low	PL
Informational	PI
Priority Not Indicated	PN
Priority Unknown	PU

The Alarm Type is specific in the Alert Type Column in the Dialysate Data Elements Table.

Alarm Type	Code

Above high normal	H

085

086

**OBX-11 Observation Result Status**

087

HL7 Specification: This field contains the observation result status, *HL7 Table 0085*.

088

This specification: This field will always be Final ("F").

089

**OBX-14 Date/Time of Observation**

090

HL7 Specification: This field is required in two circumstances. The first is when the observations reported beneath one report header (OBR) have different dates/times. This could occur in the case of queries, timed test sequences, or clearance studies where one measurement within a battery may have a different time than another measurement.

091

092

093

094

This specification: Dialysis Machines' use this field to report the time and date of spot check values such as non-invasive blood pressure.

095

096

097

**6.2.5 PID – Patient Identification Segment**

098

The PID segment is used by all applications as the primary means of communicating patient identification information. This segment contains permanent patient identifying and demographic information that, for the most part, is not likely to change frequently.

099

**PID-3.1 Patient Identifier List**

ID Number contains a unique identifier for the patient assigned by the Device or entered by the User. Identifier Type Code is constrained by Table 0203 listed below (others can be included as defined in the 2.6 standard). The first identifier will always be the unique model/serial number of the Dialysis Machine with an identifier type code of U (see table following). This will be used by the DOC to match the device reports with the patient accounts.

HL7 Table 0203

Code	Description	Notes	Use
U	Model and Serial Number of Device MDC_ID_MODEL_NUMBER and MDC_ID_PROD_SPEC_SERIAL	Model and Serial number will be concatenated together and will be unique within an Assigning Authority. The format of the ID will be following: "model:xxx/serial:yyy" Example: model:XZY987/serial:abc123	R
SS	Patient Social Security Number	Social Security number will be included if known.	RE

**6.2.6 PV1 – Patient Visit Segment**

The PV1 segment is used by Registration/Patient Administration applications to communicate information on an account or visit-specific basis. Because it is required in the PCD-01 Message, it is included in this standard. The Dialysis Machine Provides the bare minimum of data to be compliant.

**PV1-2 Patient Class (CWE)**

HL7 Definition: This field is used by systems to categorize patients by site. See HL7 Table 0004.

This specification: Dialysis machines will always use the Unknown Patient Class.

**PV1-2 Patient Class (PL)**

HL7 Definition: This field contains the patient's initial assigned location or the location to which the patient is being moved.

This specification: This field contains the patient's current location.

The fields of the Person Location (PL) data type are complex and the reader is referred to the HL7 Chapter on Data Types. Several examples from that chapter are shown below.

Example: Nursing Unit

A nursing unit at Community Hospital: 4 East, room 136, bed B

**PV1-19 Visit Number (CX)**

HL7 Definition: This field contains the unique number assigned to each patient visit.

This specification: This field will be empty.

## 7 Dialysis Data Elements

### 7.1 Tables

This section defines tables of values used by the message elements.

**\_TBL\_01 – Mode of Operation**

Value	Description
PRETX	Pre-Treatment - Preparing for dialysis but no blood in extracorporeal circuit
TX	Treatment - Blood in the extracorporeal circuit
POSTTX	Post-Treatment - After dialysis but no longer any blood in extracorporeal circuit
DIS	Disinfection or rinse of dialysis fluid path.
IDL	Idle
SVC	Service mode

**\_TBL\_02 – Treatment Modality**

Value	Description
HD	Hemodialysis – dialysis with diffusive transport of solutes.
HDF	Hemodiafiltration – dialysis with both diffusive and convective transport of solutes
HF	Hemofiltration – dialysis with convective transport of solutes.
SLED	Sustained low efficiency dialysis.
IUF	Isolated Ultrafiltration - Removal of plasma water without dialysis
HP	Hemoperfusion – Removal of solutes from blood by adsorption.

**\_TBL\_03 – Anticoagulation Mode**

<b>Value</b>	<b>Description</b>
BOL	Bolus - Administration of a fixed amount of anticoagulant drug during a specific time
CON	Continuous - Anticoagulant drug administered at a constant rate
BOLCON	Combination of Bolus and Continuous mode
PRO	Profile - Anticoagulant drug administered at a variable rate according to a programmed profile
BOLPRO	Combination of Bolus and Profile mode
NONE	None

**\_TBL\_04 – Patient Position**

<b>Value</b>	<b>Description</b>
SITTING	Sitting
STANDING	Standing
SUPINE	Supine

**\_TBL\_05 – Blood Pump Mode**

<b>Value</b>	<b>Description</b>
2N	Double Needle - Separate needles/catheter lumens for arterial and venous blood flow
1N1P	Single Needle/Single Pump - The same needle/catheter lumen used for both arterial and venous blood flow, blood flow controlled by one pump

**\_TBL\_05 – Blood Pump Mode**

<b>Value</b>	<b>Description</b>
1N2P	Single Needle/Double Pump - The same needle/catheter lumen used for both arterial and venous blood flow, blood flow controlled by two pumps

**\_TBL\_06 – Dialysis Flow Mode**

<b>Value</b>	<b>Description</b>
CONST	Constant dialysis fluid flow
AUTO	Auto - Dialysis fluid flow is automatically controlled by the dialysis machine
PRO	Profile - Variable dialysis fluid flow according to a programmed profile
STBY	Standby - dialysis fluid flow is reduced when dialysis machine is not providing treatment
NONE	Dialysis fluid does not flow.

**\_TBL\_07 – Replacement Fluid Delivery Mode**

<b>Value</b>	<b>Description</b>
CONST	Constant replacement fluid flow
PRO	Profile - Variable replacement fluid flow according to a programmed profile
NONE	None, Not Applicable.
BOLUS	Bolus - administration of a fixed amount of replacement fluid during a specific time
AUTO	Automatic - Replacement fluid flow is automatically controlled by the dialysis machine

**\_TBL\_08 – RF Dilution Location**

<b>Value</b>	<b>Description</b>
PREF	Pre-Filter
POSTF	Post-Filter
PREF-POSTF	Both Pre-Filter and Post-Filter
PREP-POSTF	Both Pre-Pump and Post-Filter

**\_TBL\_09 – Fluid Source**

<b>Value</b>	<b>Description</b>
BAG	Bag – Replacement fluid
ONLINE	Online - Replacement fluid prepared by dialysis machine

**\_TBL\_10 – Plasma Volume Marker**

<b>Value</b>	<b>Description</b>
NONE	None – No selection made at time of reading/reporting
SYMP	Symptomatic – Noting a symptom for continue monitoring.
INTER	Intervention – Action was taken or a machine setting was changed

**\_TBL\_11 – Plasma Volume Profile**

<b>Value</b>	<b>Description</b>
FLAT	Change less than or equal to 3% per hour
GRAD	Change greater than 3% and less than or equal to 6.5% per hour
STEEP	Change greater than 6.5% per hour

**\_TBL\_12 – Completion Method**

<b>Value</b>	<b>Description</b>
CT	Clock Time
AT	Actual Treatment Time
UF	UF Removed
KTV	Kt/V
USER	The treatment runs until stopped by the user.

**\_TBL\_13 – Ultrafiltration Mode**

<b>Value</b>	<b>Description</b>
NONE	None
CONST-WT	UF removed at a constant rate with a target volume

**\_TBL\_14 – Bicarb Delivery Mode**

<b>Value</b>	<b>Description</b>
CONST	Constant – Bicarbonate concentration in dialysis fluid is constant.
PRO	Profile - Bicarbonate concentration in dialysis fluid is adjusted according to a programmed profile
NA	Not Applicable

**\_TBL\_15 – Sodium Delivery Mode**

<b>Value</b>	<b>Description</b>
CONST	Constant - Sodium concentration in dialysis fluid is constant
PRO	Profile - Sodium concentration in dialysis fluid is adjusted according to a programmed profile

## 7.2 Private Data Objects

The Common Data Objects defined in the next section were created to support a wide range of dialysis machines and therapies. Although, the number of objects is large it is not exhaustive. If there is a need to capture an object that is not defined, 11073 Private Terms may be used. 11073 Terms consists of a Partition and Term Code. The Term is equal to  $\text{Partition} * 2^{16} + \text{Term Code}$ . Private Terms are Terms whose Term Codes are in the range of 0xF000 to 0xFFFF. For Dialysis Machine Private Terms, these values are in the range of 2:0xF000 and 2:0xFFFF. For example, a manufacturer that needed to define a term for a Blood Warmer Settings could use the following:

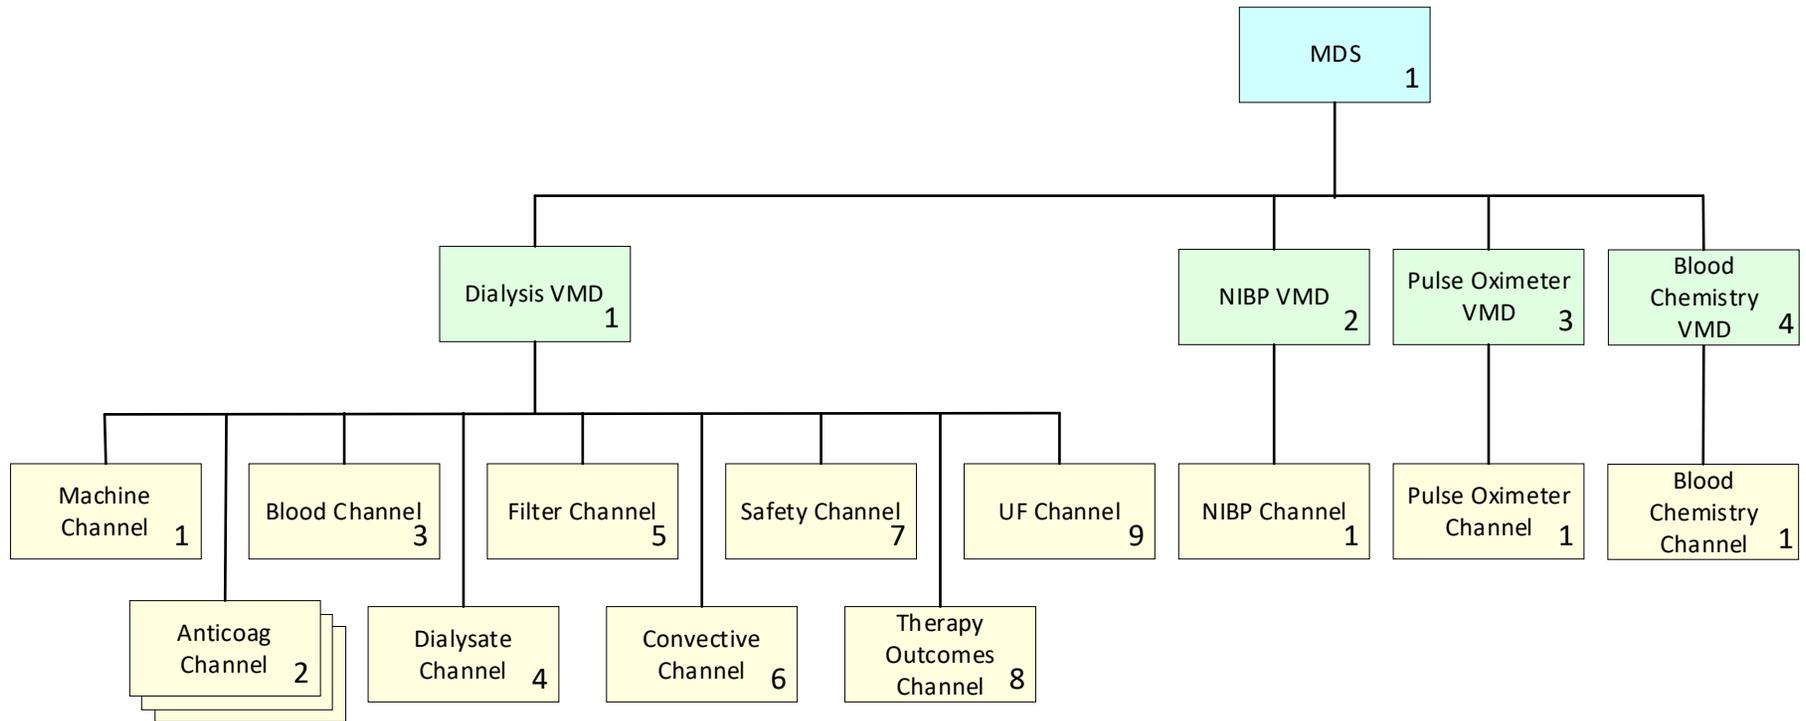

```
192548^MDCACME_BLOOD_TEMP_SETTING^MDC
```

The value 129548 is partition 2 and item 0xF024.

Text based REFID should be descriptive and unique enough to allow the manufacturer to be identified. For example, "MDCACME".

It is the responsibility of the manufacturer to disclose the meaning of any private terms that they report if they are needed by an external entity.

### 7.3 Common Data Objects

In the table below when usage is conditional (C), a number is given. The number refers to one of the following conditions. If the condition is not met then the cardinality is "0..0".

- 1) If Anticoagulation Mode is not None
- 2) If Anticoagulation Mode includes Bolus
- 3) If Anticoagulation Mode includes Continuous or Profile
- 4) One for each anticoagulant pump
- 5) If Blood Pump Mode is not double needle
- 6) If Mode is HD or HDF
- 7) If Mode is HF or HDF and Dilution is Post or Pre-Post
- 8) If Mode is HDF or HF
- 9) If Replacement Fluid Mode is Bolus
- 10) If Completion Method is not None
- 11) if UF removal includes a target volume
- 12) If Mode is HD or HDF and the dialysis machine knows the conductivity through direct measurement or by knowing what type of bagged fluid is being used.

Any object below that is a cumulative total is the total since the start of treatment and not since the start of the filter.

### Notes

- 1) In the case where the Event Identified is MDC\_EVT\_LO or MDC\_EVT\_HI, the dialysis machine will report the value of the parameter that is out of bounds in OBX-2 in the second observation. The parameter that is reported is shown in the Source Identifier column. The limit/range that is violated is reported in OBX-7 in the second observation.

## Appendix A – HL7 Batch Protocol

In order to capture an entire dialysis machine treatment, the HL7 Batch Protocol should be used. This protocol combines a series of intact MSH messages into a single message. The Batch Protocol preserves the content of the original PCD-01 DEC MSH messages. Although they are not required the manufacturer may include the ACK messages in the batch.

Segment	Meaning	Use	Card
[FHS]	File Header Segment	R	[1..1]
{	Batch Begin		
[BHS]	Batch Header Segment	R	[1..1]
{ [	Message begin		
MSH	One or more HL7 Messages	R	[1..N]
...			
...			
] }	MESSAGE end	R	[1..1]
[BTS]	Batch Trailer Segment	R	[1..1]
[FTS]	File Trailer Segment	R	[1..1]

### A.1 Segments

#### A.1.1 BHS – Batch Header Segment

The BHS segment defines the start of a batch.

HL7 Attribute Table - BHS Segment

SEQ	DT	OPT	TBL#	ELEMENT NAME
1	ST	R		Batch Field Separator
2	ST	R		Batch Encoding Characters
3	HD	R		Batch Sending Application
4	HD	O		Batch Sending Facility
5	HD	O		Batch Receiving Application
6	HD	O		Batch Receiving Facility
7	DTM	O		Batch Date/Time of Message
8	ST	O		Batch Security
9	ST	O		Batch Name/ID/Type
10	ST	O		Batch Comment
11	ST	O		Batch Control ID
12	ST	O		Reference Batch Control ID
13	HD	O		Batch Sending Network Address
14	HD	O		Batch Receiving Network Address

This standard does not change any field definitions from the HL7 Standard.

BHS-3 Batch Sending Application

This Standard: This value is the same as the MSH-3 of the observations.

#### A.1.2 BTS – Batch Trailer Segment

The BTS segment defines the end of a batch.

**HL7 Attribute Table - BTS Segment**

SEQ	DT	OPT	TBL#	ELEMENT NAME
1	ST	O		Batch Message Count
2	ST	O		Batch Comments
3	NM	X		Batch Totals

**BTS-3 Batch Totals (NM)**

HL7 Definitions: We encourage new users of this field to use the HL7 Version 2.3 data type of NM and to define it as "repeating." This field contains the batch total. If more than a single batch total exists, this field may be repeated.

This Standard: The dialysis machines do not use the batch totals as this information is already conveyed by observation data.

**A.1.3 FHS – File Header Segment**

The FHS segment is used to head a file (group of batches).

**HL7 Attribute Table - FHS Segment**

SEQ	DT	OPT	TBL#	ELEMENT NAME
1	ST	R		File Field Separator
2	ST	R		File Encoding Characters
3	HD	R		File Sending Application
4	HD	O		File Sending Facility
5	HD	O		File Receiving Application
6	HD	O		File Receiving Facility
7	DTM	O		File Creation Date/Time
8	ST	O		File Security
9	ST	O		File Name/ID
10	ST	O		File Comment
11	ST	O		File Control ID
12	ST	O		Reference File Control ID
13	HD	O		File Sending Network Address
14	HD	O		File Receiving Network Address

This standard does not change any field definitions from the HL7 Standard.

**FHS-3 File Sending Application**

This Standard: This value is the same as the MSH-3 of the observations.

**A.1.4 FTS – File Trailer Segment**

The FTS segment defines the end of a file.

**HL7 Attribute Table - FHS Segment**

SEQ	DT	OPT	TBL#	ELEMENT NAME
1	ST	O		File Batch Count
2	ST	O		File Trailer Comments

This standard does not change any field definitions from the HL7 Standard.
